

ABSTRACT

[0046] A snowskateboard includes a support deck having an upper side and a lower side opposite the upper side. First and second trucks are mounted to the lower side. The trucks include rotatable yokes having axles. A set of first runners is disposed over the first yoke axle. A set of second runners is disposed over the second yoke axle. A first biasing mount is mounted in each of the first runners and disposed over the first axle. The first biasing mounts each have first biasing members configured to bias in a torsional direction relative to the first truck axle. A second biasing mount is mounted in each of the second runners and is disposed over the second axle. The second biasing mounts each have second biasing members configured to bias in a torsional direction relative to the second axle.
